

List of Tables:

Table No.	Title	Page No.
2.1	Different Markets/Industries related to Food and their respective CAGR	8
2.2	Geographical Distribution of Restaurant and Hotels in India	9
2.3	Number of Hotels and Restaurants in the past three decades	10
2.4	Number of people employed in Hotels and Restaurants in the past three decades	11
2.5	Number of hotels and restaurants in the NE states of India	13
2.6	Number of workers of hotels and restaurants in the NE states	13
2.7	Change in the number of hotels and restaurants from 2005 to 2013 in NE India	14
2.8	Change in the number of workers in hotels and restaurants from 2005 to 2013 in NE India	15
3.1	Gender Gap in Literacy over the last three decades in Assam	23
7.1	Number of Restaurants taken from different locations of Guwahati	55
7.2	Number of Restaurants of different types taken for study	56
7.3	Number of Restaurants on the basis of number and gender of owners	57
7.4	Number of Restaurants with different years of operation	58
7.5	Summary statistics of the 9 inputs taken for study	58
7.6	Summary statistics of some crucial elements of the restaurants	59
7.7	Top 10 most efficient restaurants using CCR method	60
7.8	Least 10 inefficient restaurants using CCR method	60
7.9	Top 10 most efficient restaurants using BCC method	61

7.10	Least 10 inefficient restaurants using BCC method	61
7.11	Top 10 most efficient restaurants using Muller's method	62
7.12	Least 10 inefficient restaurants using Muller's method	62
7.13	Correlation among the scores derived from the three methods	62
7.14	Analysis of the slack terms of input 'labour'	64
7.15	Analysis of the slack terms of input 'raw materials'	65
7.16	Analysis of the slack terms of input 'energy'	66
7.17	Analysis of the slack terms of input 'capital and land'	67
7.18	Cross Tabulation between Efficiency Score and Gender	68
7.19	Regression coefficients and other information from Binomial LOGIT between Efficiency and Gender	69
7.20	Regression coefficients and other information from Binomial LOGIT between Efficiency and Years of Operation	70
7.21	Model Summary of the Regression between Efficiency Scores and Years of Operation	71
7.22	Regression coefficients and other information from S - curve fit between Efficiency and Years of Operation	72
7.23	Regression coefficients and related information to analyse factors affecting efficiency score	74
8.1	Summary of the independent variable 'age'	79
8.2	Summary of the independent variable 'income'	80
8.3	Summary of the independent variable 'gender'	80
8.4	Summary of the independent variable 'educational qualification'	81
8.5	Summary of the independent variable 'occupation'	81
8.6	Simple Analysis of the reason for choosing restaurants dependent on age	82

8.7	Simple Analysis of the reason for choosing restaurants dependent on gender	84
8.8	Simple Analysis of the reason for choosing restaurants dependent on level of education	86
8.9	Simple Analysis of the reason for choosing restaurants dependent on occupation	88
8.10	Simple Analysis of the reason for choosing restaurants dependent on income	89
8.11	Model fit between socio-economic factors and reason to choose restaurants	91
8.12	Pseudo R square of regression between socio-economic factors and reason to choose restaurants	91
8.13	Regression coefficients and related information from M-LOGIT of socio-economic factors and reason to choose restaurants	92
8.14	Linear regression coefficients between socio-economic factors and frequency of restaurant visits	94
8.15	Linear regression coefficients between socio-economic factors and expenditure on restaurants	96
8.16	Summary of information of people opting different modes of fast food consumption	97
8.17	Model fit between socio-economic factors and mode of fast food consumption	98
8.18	M-LOGIT regression coefficients between socio-economic factors and mode of fast food consumption	100
